Comments Managing Director, Mel Stilwell:

www.1x1time.co.uk

"Having identified problems with driver duty planning I decided to set up 1x1 Time (UK) Ltd in 2009, developing a unique and inexpensive point and click software solution".

He further adds

"This solution is so versatile that for Management - Getting things done through people, within an organisation, helps to make the administration become more efficient. Saving both time and money."

Complete with holiday planning capabilities along with a time and attendance package. The flexible software allows both drivers and office staff to clock in using electronic terminals, ticketing machines or directly from PC's, no matter how complex the shift patterns!

Exhibiting at the NEC for the first time, to celebrate the launch of our new comprehensive package of software and hardware for the Bus, Coach and Coach Tour operators.

A major bonus with this Time & Attendance technology is that it can be used in most other areas of business such as the retail/leisure industry, manufacturing and distribution.

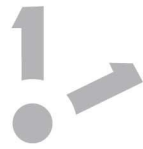

Based on the most advanced technology currently available, it has been designed so that it is easy to install and use. The software supports fixed, variable shifts, rotating shifts and flexi time. Offering you on screen viewing and editing of clocking times and hours worked. The software includes automatic highlighting of lateness, unauthorised absence and other anomalies. Providing graphical booking and recording of holidays, sickness and customised leave types .

The unique flexible design features of this standard software solution, allows the smaller company to maintain clocking in records, flexi-time, holiday's and employee/driver planning. All of which can be linked to other enterprise applications (e.g. payroll interface) providing a totally seamless solution.

If entry into offices out of working hours is a problem, using the latest wireless capable locks for access control, provides an intelligent and simple way to raise the security level of premises at costs that are comparable to traditional mechanical locks and as a result we have the ability to integrate this latest technology into our software.

1x1 TIME (UK) LTD

We have the Solution!
